

Why AquaBubble™?

Acid Neutralizer

Experience is the primary reason to choose R.E. Prescott Co., Inc.'s **AquaBubble™** Acid Neutralizer and one of its authorized dealers. Since 1954, we have built a solid reputation for providing homeowners and industry with time proven solutions to difficult water quality problems. Each AquaBubble Filter is professionally designed for years of high performance.

AquaBubble™ acid neutralizers eliminate corrosion in the plumbing system, stopping fixture deterioration, pinhole leaks, and unsightly blue/green staining.

They prevent costly repairs of plumbing fixtures and do not require chemicals to treat the water. The media (crushed and screened white marble limestone known as Neutralite) increases alkalinity and raises pH in the water and does not require regeneration, only periodic backwashing.

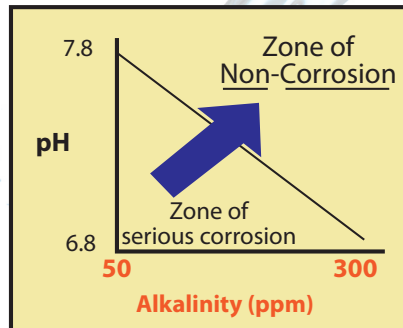

Our units are programmed to backwash on the day and time you choose.

The Benefits

Benefits of pH balanced water:

› A simple graph shows the effect AquaBubble acid neutralizers have on pH and Alkalinity (a water buffer measurement) to stop corrosion. Unsightly blue/green stains from corroding piping and fixtures will be eliminated. Enjoy the added benefit of sediment filtration down to 20-40 microns. Your AquaBubble acid neutralizer will work hard for you, simply add the prescribed neutralizer blend each year or so. This will prevent costly repairs of plumbing as well as general maintenance, adding years to the life of your home.

Standard Equipment Includes:

- › Neutralizer Media
- › Fiberglass Mineral Tank
- › Full 1" Internal Piping
- › Automatic backwashing control valve, capable of being custom tailored to your specific application
- › Bypass valve
- › All accessories for installing the AB-A unit
